Network Profile

A network profile is a global setting for your device that defines how it will work in the network.

For example, selecting a particular profile may configure your device as a wireless repeater or as a fully routed NAT gateway.

Depending on the selected profile, available features and settings will be different.

Some sample profiles:

Profile	Description
Bridged IPTV	IPTV service in a bridged network.
VoIP + Bridged IPTV	Both VOIP and IPTV service in a bridged network.
Wireless Repeater	Wireless bridge.
Fully Routed (NAT)	All features with NAT capability.
