

SSL SAN

A Subject Alternative Name - SAN - is an additional name associated with an [SSL server certificate](#).

The name can be a [hostname](#), an [IP address](#), a [common name](#) or other identifier.

Typical uses for SANs is when you want to cover multiple names across different domains/subdomains ([www.example.com](#) and [www.example.net](#)) with the same certificate, or when you have a multiple virtual hosts on the same IP address.
